PHP Assignment (Individual)

Rapid Application Development - SCS2208

Implemented Functionalities

- ➢ Add an Administrator
- ➢ Delete an Administrator
- ➢ Update details of an existing Administrator
- ➢ View All

1. Add an Administrator

Add functionality provides the feature of adding new administrator to the system. It is implemented using form consisting of many required details.The Admin ID is auto generated by the system and it can`t be changed.

- ➢ Form Details :
- ➢ First Name
- ➢ Last Name
- ➢ Gender
- ➢ Date of Birth
- ➢ NIC
- ➢ Address
- ➢ Email
- ➢ Mobile
- ➢ Designation
- ➢ Password
- ➢ Date Joined

All the details are stored in the Database.
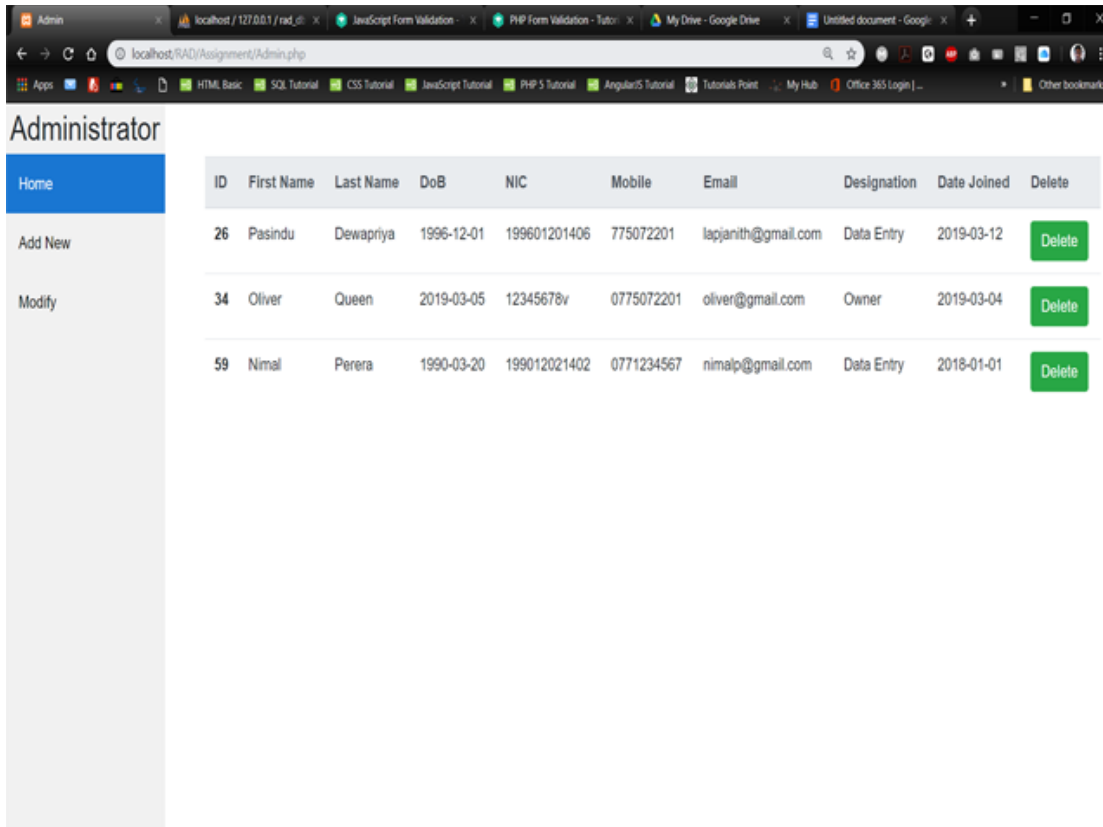

2. Delete an Administrator

Administrator can perform delete operation on existing administrators. Using simple button click.

3. Update details of an existing Administrator

Update functionality provides the feature of modifying the details of existing administrators. For doing that user can enter either Administrator ID or NIC to perform a search in order to find the record which is to be updated. To update Administrator details user must enter the password corresponding to the administrator. If not updation cannot proceed.

4. View All

Administrator can view all the records of existing Administrators in tabular format.
